With an increased focus on sustainable design, Archicad 22 integrates tools for energy evaluation and performance analysis directly into the modeling environment.

Practical Applications and Workflow Enhancements

Modeling and Design

Both versions facilitate a parametric approach to modeling, allowing architects to modify elements easily without manual redrawing. Features such as morph tool (introduced in later versions but supported in 21 & 22) enable freeform modeling, bridging the gap between traditional CAD and conceptual design.

Documentation and Detailing

Archicad's automatic documentation capabilities ensure that modifications made in the model are reflected instantly in drawings, schedules, and reports. The improved linking between model and documentation reduces errors and accelerates project delivery.

Collaboration and Communication

The BIMcloud in Archicad 22 revolutionizes team collaboration, supporting multi-user editing and cloud-based project sharing. This is particularly valuable for large-scale projects where multiple

disciplines work simultaneously.

Visualization and Client Engagement

The integration of CineRender and BIMx allows for compelling visualizations and immersive walkthroughs, enhancing client presentations and design reviews.
