Question What is the purpose of configuring VLANs in a Cisco CCNA student lab? Configuring VLANs helps segment network traffic, improve security, and optimize performance by creating separate broadcast domains within a switch network. How do you verify VLAN configuration on a Cisco switch? Use commands like 'show vlan brief' to display VLANs configured on the switch and 'show vlan id [vlan number]' for detailed information about a specific VLAN. What is the significance of configuring a trunk link between switches? Trunk links carry traffic for multiple VLANs between switches, enabling inter-VLAN communication and expanding network segmentation across devices. How can students troubleshoot connectivity issues between devices in a CCNA lab? Students can use commands like 'ping', 'traceroute', 'show ip interface brief', and 'show running-config' to diagnose and resolve network connectivity problems. What is the role of DHCP in a CCNA lab environment? DHCP dynamically assigns IP addresses and network configuration parameters to devices, simplifying network management and ensuring devices have correct IP settings. How do you secure access to network devices in a CCNA lab? Implement security measures such as enabling password protection on console and VTY lines, using SSH for remote access, and applying access control lists (ACLs) to restrict unauthorized access. What is the purpose of configuring static routes in a CCNA lab? Static routes manually define specific network

paths, enabling devices to communicate with remote networks when dynamic routing protocols are not used or not configured. Why is it important to save your configuration after making changes in a Cisco CCNA lab? Saving the configuration with the 'copy running-config startup-config' command ensures that your settings persist after a device reboot, preventing loss of configuration changes.

```

```
Switch(config) vlan 10
```

```
Switch(config-vlan) name Sales
```

```
Switch(config) interface fastethernet 0/1
```

```
Switch(config-if) switchport mode access
```

```
Switch(config-if) switchport access vlan 10
```

```
...
```

Expected results include successful VLAN creation and correct port assignments, verified through commands like `show vlan brief`.

Inter-VLAN Routing

Since VLANs are isolated at Layer 2, inter-VLAN routing is necessary for communication between VLANs. The manual walks instructors through configuring:

- Router-on-a-stick configurations using sub-interfaces
- Assigning IP addresses to sub-interfaces
- Verifying routing between VLANs

Sample answer configurations include setting up sub-interfaces:

```

```

```
Router(config-subif) ip address 192.168.10.1 255.255.255.0
```

```
...
```

Testing connectivity with `ping` commands confirms proper inter-VLAN communication.

## Trunking Protocols and Configurations

Trunk links carry multiple VLANs across switches. The manual provides guidance on:

- Configuring trunk ports
- Using protocols like IEEE 802.1Q
- Verifying trunk status with `show interfaces trunk`

Answer explanations include setting switch ports as trunk:

```
``plaintext
```

```

```

```
Switch(config-if) switchport mode trunk
```

```
Switch(config-if) switchport trunk encapsulation dot1q
```

```
...
```

Proper trunk configuration ensures seamless VLAN traffic flow.

## Network Security Measures

Security is a critical focus. Exercises include:

- Securing switch ports (e.g., disabling unused ports)
- Implementing port security features
- Configuring access control lists (ACLs)
- Verifying security settings

Sample configurations demonstrate setting port security:

```
``plaintext
```

```
Switch(config) interface fastethernet 0/1
```

```
Switch(config-if) switchport port-security
```

```
