Sample Questions from MSBTE Applied Physics with Answers

Sample Question 1: Multiple Choice

Q: Which of the following is the SI unit of electric capacitance?

- A) Coulomb
- B) Farad
- C) Ohm
- D) Volt

Answer: B) Farad

Sample Question 2: Short Answer

Q: State and explain Ohm's Law.

Answer: Ohm's Law states that the current flowing through a conductor between two points is directly proportional to the voltage across the two points, provided the temperature remains constant. Mathematically, $V = IR$, where V is voltage, I is current, and R is resistance.

Sample Question 3: Numerical Problem

Q: A resistor of resistance 10Ω is connected to a 12V power supply. Calculate the current flowing through the resistor.

Solution: Using Ohm's Law, $I = V / R = 12V / 10\Omega = 1.2A$

Sample Question 4: Long Answer

Q: Explain the working principle of a transformer and list its main components.

Answer: A transformer works on the principle of electromagnetic induction. It converts electrical energy from one voltage level to another through mutual induction between two coils (primary and secondary) wound around a common iron core. When an alternating current flows through the primary coil, it creates a changing magnetic flux, which induces a voltage in the secondary coil. The voltage transformation depends on the turns ratio of the coils.

- Main Components:

- Core: Usually made of laminated iron sheets to minimize eddy current losses.
- Primary Winding: The coil connected to the input voltage.
- Secondary Winding: The coil from which the transformed voltage is obtained.

- Answer: Ohm (?)

- Question: Which phenomenon explains the bending of light when it passes from air to glass?
- Answer: Refraction

Analysis: These questions test basic knowledge. Memorize units and fundamental phenomena.

Short Answer Questions

- Question: State and explain Ohm's Law.
- Answer: Ohm's Law states that the current passing through a conductor between two points is directly proportional to the voltage across them, provided temperature remains constant. Mathematically, $V = IR$, where V is voltage, I is current, and R is resistance.

Analysis: Emphasize clarity. Include the law's statement, conditions, and a simple diagram if necessary.

Long Answer Questions

- Question: Derive the expression for the velocity of a wave on a stretched string.
- Answer:

The velocity (v) of a wave on a string is given by $v = \sqrt{\frac{T}{\mu}}$, where (T) is the tension in the string and (μ) is the linear mass density.

Derivation:

Starting from Newton's second law and considering small oscillations, the restoring force due to tension causes wave propagation. The wave speed depends on the tension and mass per unit length, leading to the formula above.

Analysis: Derivations should be systematic, with clear steps and proper notation. Practice writing neat, organized solutions.
